

Test Equipment Solutions Datasheet

Test Equipment Solutions Ltd specialise in the second user sale, rental and distribution of quality test & measurement (T&M) equipment. We stock all major equipment types such as spectrum analyzers, signal generators, oscilloscopes, power meters, logic analysers etc from all the major suppliers such as Agilent, Tektronix, Anritsu and Rohde & Schwarz.

We are focused at the professional end of the marketplace, primarily working with customers for whom high performance, quality and service are key, whilst realising the cost savings that second user equipment offers. As such, we fully test & refurbish equipment in our in-house, traceable Lab. Items are supplied with manuals, accessories and typically a full no-quibble 2 year warranty. Our staff have extensive backgrounds in T&M, totalling over 150 years of combined experience, which enables us to deliver industry-leading service and support. We endeavour to be customer focused in every way right down to the detail, such as offering free delivery on sales, covering the cost of warranty returns BOTH ways (plus supplying a loan unit, if available) and supplying a free business tool with every order.

As well as the headline benefit of cost saving, second user offers shorter lead times, higher reliability and multivendor solutions. Rental, of course, is ideal for shorter term needs and offers fast delivery, flexibility, try-before-you-buy, zero capital expenditure, lower risk and off balance sheet accounting. Both second user and rental improve the key business measure of Return On Capital Employed.

We are based near Heathrow Airport in the UK from where we supply test equipment worldwide. Our facility incorporates Sales, Support, Admin, Logistics and our own in-house Lab.

All products supplied by Test Equipment Solutions include:

- No-quibble parts & labour warranty (we provide transport for UK mainland addresses).
- Free loan equipment during warranty repair, if available.
- Full electrical, mechanical and safety refurbishment in our in-house Lab.
- Certificate of Conformance (calibration available on request).
- Manuals and accessories required for normal operation.
- Free insured delivery to your UK mainland address (sales).
- Support from our team of seasoned Test & Measurement engineers.
- ISO9001 quality assurance.

Spectrum Analyzers

RSA6000 Series Data Sheet

Features & Benefits

RSA6000 Series 6.2, 14, and 20 GHz Spectrum Analyzers

- High-performance Spectrum Analysis
 - 20 dBm Third-order Intercept at 2 GHz, typical
 - Displayed Average Noise Level -151 dBm/Hz at 2 GHz (-170 dBm/Hz, Preamp On, typical) Enables Low-level Signal Search
 - ± 0.5 dB Absolute Amplitude Accuracy to 3 GHz for High Measurement Confidence
 - Fully Preselected and Image Free at All Times for Maximum Dynamic Range at Any Acquisition Bandwidth
 - Fastest High-resolution Sweep Speed: 1 GHz Sweep in 10 kHz RBW in less than 1 Second
- Discover
 - DPX® Spectrum Processing provides an Intuitive Understanding of Time-varying RF Signals with Color-graded Displays based on Frequency of Occurrence
 - Revolutionary DPX Displays Transients with a Minimum Event Duration of 10.3 μ s
 - Swept DPX Spectrum Enables Unprecedented Signal Discovery over Full Instrument Span

- Trigger
 - Trigger on Transients with a Minimum Event Duration of 10.3 μ s in the Frequency Domain, 20 ns in Time Domain
 - DPX Density™ Trigger Activated Directly from DPX Display
 - Time-qualified and Runt Triggers Trap Elusive Transients
 - Frequency Mask Trigger Captures any Change in Frequency Domain
- Capture
 - All Signals up to 110 MHz Spans are Captured into Memory
 - Up to 1.7 s Acquisitions at 110 MHz Bandwidth Provides Complete Analysis without making Multiple Acquisitions
 - Interfaces with TekConnect Probes for RF Probing
- Analyze
 - Time-correlated Multidomain Displays for Quicker Understanding of Cause and Effect when Troubleshooting
 - Power, Spectrum, and Statistics Measurements Help You Characterize Components and Systems: Channel Power, ACLR, Power vs. Time, CCDF, OBW/EBW, and Spur Search
 - EMI Diagnostics with CISPR and Mil-6 dB filters and CISPR Quasi-peak Average and Peak Detectors
 - Phase Noise and Jitter Measurements (Opt. 11)
 - Pulse Measurements (Opt. 20) - Over 20 Vector and Scalar Parameters including Rise Time, Pulse Width, Pulse-to-Pulse Phase Provide Deep Insight into Pulse Train Behavior
 - General Purpose Digital Modulation Analysis (Opt. 21) Provides Vector Signal Analyzer Functionality for Over 20 Modulation Types
 - Tektronix OpenChoice® makes for Easy Transfer to a Variety of Analysis Programs such as Excel and MATLAB®

Applications

- Spectrum Management - Find Interference and Unknown Signals
- Radar/EW - Full Characterization of Pulsed and Hopping Systems Characterize Radar and Pulsed RF Signals
- RF Debug - Components, Modules, and Systems
- Radio/Satellite Communications - Analyze Time-variant Behavior of Cognitive Radio and Software-defined Radio Systems
- EMI Diagnostics – Increase Confidence that Designs will Pass Compliance Testing

Revolutionary DPX® spectrum display reveals transient signal behavior that helps you discover instability, glitches, and interference. Here, an infrequently occurring transient is seen in detail. The frequency of occurrence is color-graded, indicating the infrequent transient event in blue and the noise background in red. The DPX Density™ Trigger is activated, seen in the measurement box at the center of the screen, and Trigger On This™ has been activated. Any signal density greater than the selected level causes a trigger event.

High-performance Spectrum and Vector Signal Analysis, and a Lot More

The RSA6000 Series replaces conventional high-performance signal analyzers, offering the measurement confidence and functionality you demand for everyday tasks. A typical 20 dBm TOI and -151 dBm/Hz DANL at 2 GHz gives you the dynamic range you expect for challenging spectrum analysis measurements. All analysis is fully preselected and image free. The RSA6000 Series uses broadband preselection filters that are always in the signal path. You never have to compromise between dynamic range and analysis bandwidth by 'switching out the preselector'.

A complete toolset of power and signal statistics measurements are standard, including Channel Power, ACLR, CCDF, Occupied Bandwidth, AM/FM/PM, and Spurious measurements. Available Phase Noise and General Purpose Modulation Analysis measurements round out the expected set of high-performance analysis tools.

But, just being a high-performance signal analyzer is not sufficient to meet the demands of today's hopping, transient signals.

The RSA6000 Series will help you to easily discover design issues that other signal analyzers may miss. The revolutionary DPX® spectrum display offers an intuitive live color view of signal transients changing over time in the frequency domain, giving you immediate confidence in the stability of your design, or instantly displaying a fault when it occurs. This live display of transients is impossible with other signal analyzers. Once a problem is discovered with DPX®, the RSA6000 Series spectrum analyzers can be set to trigger on the event, capture a contiguous time record of changing RF events, and perform time-correlated analysis in all domains. You get the functionality of a high-performance spectrum analyzer, wideband vector signal analyzer, and the unique trigger-capture-analyze capability of a real-time spectrum analyzer – all in a single package.

Discover

The patented DPX® spectrum processing engine brings live analysis of transient events to spectrum analyzers. Performing up to 292,000 frequency transforms per second, transients of a minimum event duration of 10.3 μs in length are displayed in the frequency domain. This is orders of magnitude faster than swept analysis techniques. Events can be color coded by rate of occurrence onto a bitmapped display, providing unparalleled insight into transient signal behavior. The DPX spectrum processor can be swept over the entire frequency range of the instrument, enabling broadband transient capture previously unavailable in any spectrum analyzer.

Trigger and Capture: The DPX Density™ Trigger monitors for changes in the frequency domain, and captures any violations into memory. The spectrogram display (left panel) shows frequency and amplitude changing over time. By selecting the point in time in the spectrogram where the spectrum violation triggered the DPX Density™ Trigger, the frequency domain view (right panel) automatically updates to show the detailed spectrum view at that precise moment in time.

Trigger

Tektronix has a long history of innovative triggering capability, and the RSA Series spectrum analyzers lead the industry in triggered signal analysis. The RSA6000 Series provides unique triggers essential for troubleshooting modern digitally implemented RF systems. Includes time-qualified power, runt, density, and frequency mask triggers.

Time qualification can be applied to any internal trigger source, enabling capture of 'the short pulse' or 'the long pulse' in a pulse train, or only

triggering when a frequency domain event lasts for a specified time. Runt triggers capture troublesome infrequent pulses that either turn on or turn off to an incorrect level, greatly reducing time-to-fault.

DPX Density™ Trigger works on the measured frequency of occurrence or density of the DPX display. The unique Trigger On This™ function allows the user to simply point at the signal of interest on the DPX display, and a trigger level is automatically set to trigger slightly below the measured density level. You can capture low-level signals in the presence of high-level signals at the click of a button.

The Frequency Mask Trigger (FMT) is easily configured to monitor all changes in frequency occupancy within the acquisition bandwidth.

A Power Trigger working in the time domain can be armed to monitor for a user-set power threshold. Resolution bandwidths may be used with the power trigger for band limiting and noise reduction. Two external triggers are available for synchronization to test system events.

Capture

Capture once – make multiple measurements without recapturing. All signals in an acquisition bandwidth are recorded into the RSA6000 Series deep memory. Record lengths vary depending upon the selected acquisition bandwidth – up to 1.7 seconds at 110 MHz, 81.9 seconds at 1 MHz, or 1.46 hours at 10 kHz bandwidth with FMT / Deep Memory (Opt. 02). Real-time capture of small signals in the presence of large signals is enabled with 73 dB SFDR in all acquisition bandwidths, even up to 110 MHz (Opt. 110).

Time-correlated, multidomain views provide a new level of insight into design or operational problems not possible with conventional analysis solutions. Here, ACLR and Vector Modulation Quality (Opt. 21) are performed on a single acquisition, combined with the continuous monitoring of the DPX® spectrum display.

Spurious search – Up to 20 noncontiguous frequency regions can be defined, each with their own resolution bandwidth, video bandwidth, detector (peak, average, Quasi-peak), and limit ranges. Test results can be exported in CSV format to external programs, with up to 999 violations reported. Spectrum results are available in linear or log scale.

Analyze

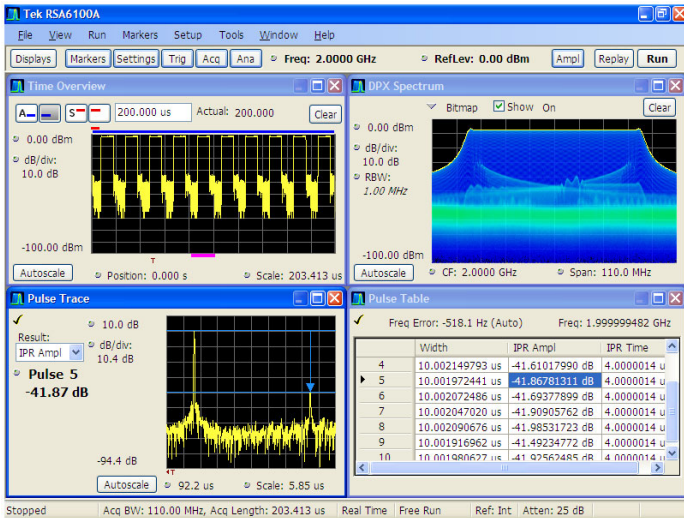

The RSA6000 Series offers analysis capabilities that advance productivity for engineers working on components or in RF system design, integration, and performance verification, or operations engineers working in networks, or spectrum management. In addition to spectrum analysis, spectrograms display both frequency and amplitude changes over time. Time-correlated measurements can be made across the frequency, phase, amplitude, and modulation domains. This is ideal for signal analysis that includes frequency hopping, pulse characteristics, modulation switching, settling time, bandwidth changes, and intermittent signals.

The measurement capabilities of the RSA6000 Series and available options and software packages are summarized below:

Measurement Functions

Measurements	Description
Spectrum Analyzer Measurements	Channel Power, Adjacent Channel Power, Multicarrier Adjacent Channel Power/Leakage Ratio, Occupied Bandwidth, xdB Down, dBm/Hz Marker, dBc/Hz Marker
Time Domain and Statistical Measurements	RF IQ vs. Time, Power vs. Time, Frequency vs. Time, Phase vs. Time, CCDF, Peak-to-Average Ratio
Spur Search Measurement	Up to 20 frequency ranges, user-selected detectors (peak, average, QP), filters (RBW, CISPR, MIL), and VBW in each range. Linear or Log frequency scale. Measurements and violations in absolute power or relative to a carrier. Up to 999 violations identified in tabular form for export in CSV format
Analog Modulation Analysis Measurement Functions	% Amplitude Modulation (+peak, -peak) Frequency Modulation (±peak, +peak to -peak, RMS, peak-peak/2, Frequency Error) Phase Modulation (±peak, RMS, +peak to -peak)
Phase Noise and Jitter Measurements (Opt. 11)	10 Hz to 1 GHz Frequency Offset range, Log Frequency Scale Traces – 2: ±Peak Trace, Average Trace, Trace Smoothing and Averaging
Advanced Pulse Measurements Suite (Opt. 20)	Average On Power, Peak Power, Average Transmitted Power, Pulse Width, Rise Time, Fall Time, Repetition Interval (seconds), Repetition Interval (Hz), Duty Factor (%), Duty Factor (ratio), Ripple (dB), Ripple (%), Overshoot (dB), Overshoot (%), Droop (dB), Droop (%), Pulse-Pulse Frequency Difference, Pulse-Pulse Phase Difference, RMS Frequency Error, Max Frequency Error, RMS Phase Error, Max Phase Error, Frequency Deviation, Phase Deviation, Impulse Response (dB), Impulse Response (time), Time Stamp
General Purpose Digital Modulation Analysis (Opt. 21)	Error Vector Magnitude (EVM) (RMS, Peak, EVM vs. Time), Modulation Error Ratio (MER), Magnitude Error (RMS, Peak, Mag Error vs. Time), Phase Error (RMS, Peak, Phase Error vs. Time), Origin Offset, Frequency Error, Gain Imbalance, Quadrature Error, Rho, Constellation, Symbol Table
DPX Density Measurement (Opt. 200)	Measures % signal density at any location on the DPX spectrum display and triggers on specified signal density
RSAVu Analysis Software	W-CDMA, HSUPA, HSDPA, GSM/EDGE, CDMA2000 1x, CDMA2000 1xEV-DO, RFID, Phase Noise, Jitter, IEEE 802.11 a/b/g/n WLAN, IEEE 802.15.4 OQPSK (Zigbee), Audio Analysis
Analysis SW (RSA-IQWIMAX)	WiMAX 802.16-2004 and 802.16e standards support
Analysis Software (RSALTE)	3GPP Release 8 LTE standards support

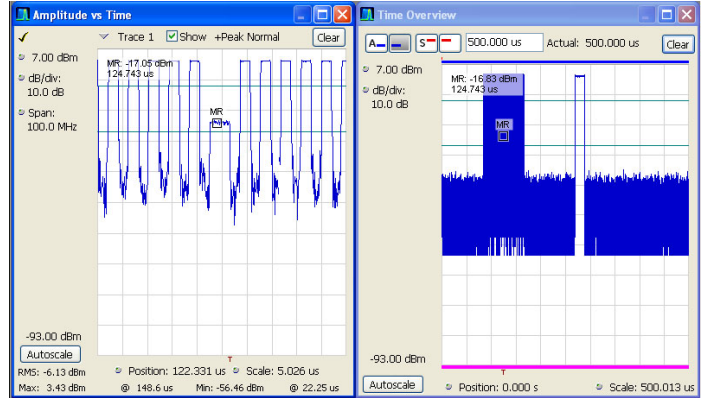

The Windows XP environment makes this multidomain analysis even easier with an unlimited number of analysis windows, all time correlated, to provide deeper insight into signal behavior. A user interface that adapts to your preferences (keyboard, front panel, touchscreen, and mouse) makes learning the RSA6000 Series easy for both first-time users and experienced hands.

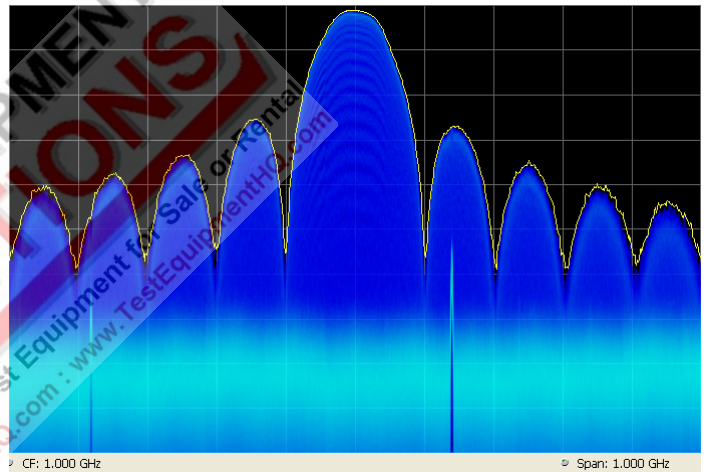

Advanced Signal Analysis package (Opt. 20) offers over 20 automated pulse parameter calculations on every pulse. Easily validate designs with measurements of peak power, pulse width rise time, ripple, droop, overshoot, and pulse-to-pulse phase. Gain insight into linear FM chirp quality with measurements such as Impulse Response and Phase Error. A pulse train (upper left) is seen with automatic calculation of pulse width and impulse response (lower right). A detailed view of the Impulse Response is seen in the lower left, and a DPX® display monitors the spectrum on the upper right.

Phase noise and Jitter measurements (Opt. 11) adds value to your RSA6000 Series by replacing a conventional phase noise tester for many applications. Phase noise can be measured at carrier offsets up to 1 GHz, and internal phase noise is automatically reduced by optimizing acquisition bandwidths and attenuator settings for each carrier offset for maximum dynamic range. For less critical measurements, speed optimization may be applied for faster results. Typical residual phase noise of -132 dBc/Hz at 1 MHz offset, 0 GHz carrier frequency gives sufficient measurement margin for many applications.

Advanced Triggers and Swept DPX (Opt. 200) combines the revolutionary DPX Density Trigger with the ability to trigger on runt pulses and apply time qualification to any trigger. The runt trigger seen here can be used to track down nonconforming pulses in a pulse train, greatly reducing time to insight. Time qualification can be used to separate ranging pulses from higher resolution pulses in a radar signal, or trigger only on signals that remain on longer than a specified time.

Advanced Triggers and Swept DPX (Opt. 200) re-invents the way swept spectrum analysis is done. The DPX engine collects hundreds of thousands of spectrums per second over a 110 MHz bandwidth. Users can now sweep the DPX across the full input range of the RSA6000 Series, up to 20 GHz. In the time a traditional spectrum analyzer has captured one spectrum, the RSA6000 Series has captured orders of magnitude more spectrums. This new level of performance reduces the chance of missing time-interleaved and transient signals during broadband searches.

Analog IF and Digital IQ Output (Opt. 05)

Characteristic	Description
Analog IF Output	
Frequency	500 MHz (±1 MHz based on center frequency selection), sidebands are frequency-inverted from input
Output Level	0 to -10 dBm for peak signal level of -20 dBm at RF mixer (typical)
Filter Control	Wide open (square top) or 60 MHz Gaussian
Bandwidth (Wide open)	>150 MHz (typical)
Bandwidth (Gaussian)	60 MHz, Gaussian to -12 dB
Digital IQ Output	
Connector Type	MDR (3M) 50 pin × 2
Data Output	Data is corrected for amplitude and phase response in real time
Data Format	I data: 16 bit LVDS Q data: 16 bit LVDS
Control Output	Clock: LVDS, Max 50 MHz (150 MHz, Opt. 110) DV (Data Valid), MSW (Most Significant Word) indicators, LVDS
Control Input	IQ data output enabled, connecting GND enables output of IQ data
Clock Rising Edge to Data Transition Time (Hold time)	8.4 ns (typical, standard), 1.58 ns (typical, Opt. 110)
Data Transition to Clock Rising Edge (Setup time)	8.2 ns (typical, standard), 1.54 ns (typical, Opt. 110)

Phase Noise and Jitter Measurement (Opt. 11)

Characteristic	Description
Carrier Frequency Range	30 MHz to Maximum Instrument Frequency
Measurements	Carrier Power, Frequency Error, RMS Phase Noise, Jitter (Time Interval Error), Residual FM
Residual Phase Noise	See Phase Noise specifications
Phase Noise and Jitter Integration Bandwidth Range	Minimum Offset from Carrier: 10 Hz Maximum Offset from Carrier: 1 GHz
Number of Traces	2
Trace and Measurement Functions	Detection: Average or ±Peak Smoothing Averaging Optimization: Speed or Dynamic Range

Advanced Measurement Suite (Opt. 20)

Characteristic	Description

Opt. 11	Phase Noise and Jitter Measurement
Opt. 20	Advanced Signal Analysis (including pulse measurements)
Opt. 21	General Purpose Digital Modulation Analysis
Opt. 110	110 MHz Real-time Acquisition BW
Opt. 200	Advanced Triggers and Swept DPX
Opt. 1R	Rackmount

*²¹ One of the following mutually exclusive options must be ordered: 06, 07, or 08.

Accessories

Accessories	Description
RTPA2A Spectrum Analyzer Probe Adapter compatibility	Supports TekConnect probes P7225, P7240, P7260, P7330, P7313, P7350, P7350SMA, P7380, P7380SMA
RSAVu	Software based on the RSA3000 Series platform for analysis supporting 3G wireless standards, WLAN (IEEE802.11a/b/g/n), RFID, Audio Demodulation, and more measurements
RSA-IQWIMAX	WiMAX 802.16-2004 and 802.16.e standards support
RSALTE	3GPP Release 8 LTE standards support
Additional Removable Hard Drive	For use with Opt. 06 (Windows XP and instrument SW preinstalled). 065-0751-xx
Additional Removable Hard Drive (Solid State)	For use with Opt. 08 (Windows XP and instrument SW preinstalled). 065-0765-xx
Transit Case	016-2026-xx
Rackmount Retrofit	016-1962-xx
Additional Quick-start Manual (Paper)	071-1909-xx
Service Manual (Paper)	071-1914-xx

International Power Plugs

Options	Description
Opt. A0	North America power
Opt. A1	Universal EURO power
Opt. A2	United Kingdom power
Opt. A3	Australia power
Opt. A4	240 V, North America power
Opt. A5	Switzerland power
Opt. A6	Japan power
Opt. A10	China power
Opt. A11	India power
Opt. A99	No power cord or AC adapter

Service

Options	Description
Opt. C3	Calibration Service 3 Years
Opt. C5	Calibration Service 5 Years
Opt. D1	Calibration Data Report
Opt. D3	Calibration Data Report 3 Years (with Opt. C3)
Opt. D5	Calibration Data Report 5 Years (with Opt. C5)
Opt. R3	Repair Service 3 Years
Opt. R5	Repair Service 5 Years
Opt. CA1	Single calibration or coverage for the designated calibration interval, whichever comes first

Upgrades**RSA6UP**

Options	Description
Opt. 01	Internal Preamp, 10 MHz - 3 GHz, 30 dB gain, 4 dB Noise Figure at 2 GHz, typical
Opt. 02	1 GB Memory, Frequency Mask Trigger for S/N \geq B020212 (RSA6106A) \geq B020603 (RSA6114A)
Opt. 2L	1 GB Memory, Frequency Mask Trigger for S/N $<$ B020212 (RSA6106A) $<$ B020603 (RSA6114A)
Opt. 05	Digital IQ Output and 500 MHz Analog IF Output
Opt. 06	Removable HDD. This removes the internal HDD, and is not compatible with Opt. 07 or 08
Opt. 07	DVD-RW, No-cost, includes internal HDD, and is not compatible with Opt. 06 or 08
Opt. 08	Removable Solid-state Hard Drive. This removes the internal HDD, and is not compatible with Opt. 06 or 07
Opt. 20	Advanced Signal Analysis (including pulse measurements)
Opt. 21	General Purpose Digital Modulation Analysis
Opt. 110	110 MHz Real-time Acquisition BW for S/N B02xxxx and above
Opt. 110L	110 MHz Real-time Acquisition BW for S/N B01xxxx
Opt. 200	Advanced Triggers and Swept DPX (Tektronix installation recommended, add Opt. IF)
Opt. IF	Installation Labor for all purchased options
Opt. IFC	Installation Labor + Calibration

Languages

Options	Description
Opt. L0	English Manual
Opt. L5	Japanese Manual
Opt. L7	Simplified Chinese Manual
Opt. L10	Russian Manual
